Aviel Cohen – Audio Project

GitHub– https://github.com/avielc11/musicProject

URL-project – https://friendly-duckanoo-09da33.netlify.app/

The main goal of this project is to display how couple audio file play together. When the button PLAY hits than all should play simultaneously. Same thing for pause button (they switch).

when all audio files play, they combined and sound like one regular song. There is a button for mute for each audio and then it is possible to see the different between them. For example - one plays the DRUMS other play the UUHO VOC voice, and the best thing is that for the reasonable person it difficult to recognize and say which one is playing right now (but here in the web site it is of course).

There are three buttons:

1. Mute – mute the audio file – each one has individual button.
2. Play / stop – play all the audio files simultaneously.
3. Repeat / play once – if it is ON then the audio files will play in loop. If OFF, then play one time.

All the buttons have the possibility to click in all situations during the audio play or not.

```
Language - JavaScript, React, CSS.
Libraries - react-icons
